Thin Solid Films 272 (1996) 401–404

thin solid films

Subject Index of Volume 272

Adsorption
computer simulation of metal thin-film epitaxy, 223
first-principles calculations of surface adsorption and migration on GaAs surfaces, 345
ab initio total energy study of adsorption and diffusion on the Si(100) surface, 375
Alloys
microstructural investigations of a textured black brass selective surface, 7
oxidation behavior of Al–W alloy films deposited on Cu as a passivation layer, 18
Aluminium oxide
oxidation behavior of Al–W alloy films deposited on Cu as a passivation layer, 18
Amorphization
atomistic simulations of amorphization processes in ion-implanted Si: roles of defects during amorphization, relaxation, and crystallization, 235
Amorphous materials
controlled crystallization of LPCVD amorphous silicon, 93
performances presented by large-area thin film position-sensitive detectors based on amorphous silicon, 148
Anisotropy
stress and stress anisotropy in Co–Cr magnetic thin films deposited by magnetron sputtering, 43
Annealing
growth studies of CaF_2 and BaF_2/CaF_2 on (100) silicon using RHEED and SEM, 37
Arsenic
first-principles calculations of surface adsorption and migration on GaAs surfaces, 345

Biomaterials
ion transport through membranes with soft interfaces. The influence of the polar zone thickness, 10
Boron
scanning tunneling microscopy study of antiphase boundaries on the (001) surface of homoepitaxial diamond films, 49

Carbon
high mobility β-SiC epilayer prepared by low-pressure rapid thermal chemical vapor deposition on a (100) silicon substrate, 4
molecular dynamics studies of particle impacts with carbon-based materials, 255
Chalcogens
thin-film copper indium diselenide prepared by selenization of copper indium oxide formed by spray pyrolysis, 71
Chemical vapor deposition
characteristics of pyroelectric sensors of polyurea films prepared by vapor deposition polymerization, 157
Chemical vapour deposition
high mobility β-SiC epilayer prepared by low-pressure rapid thermal chemical vapor deposition on a (100) silicon substrate, 4
texture-controlled diamond films synthesized by microwave plasma-enhanced chemical vapour deposition, 64
structural characterization of $PbTiO_3$ thin films prepared by ion beam induced CVD and evaporation of lead, 99
Coatings
preparation of zinc sulfide thin films by the hydrothermal method, 1
crystallographic structure of magnetron-sputtered Nb coatings using reflection high-energy electron diffraction studies, 52
an analytical solution for non-steady-state diffusion through thin films, 124
hydrogen permeation properties of molybdenum coatings from absorption–desorption experiments, 132
molecular dynamics simulations of film–substrate interface mixing in the energetic deposition of fcc metals, 244
Cobalt
nitride formation in iron–cobalt sputtered thin films, 33
Cobalt oxide
preparation and characterization of spray pyrolysed cobalt oxide thin films, 29
Computer simulation
Monte Carlo simulations of film growth, 172
Monte Carlo simulation of simple models for thin film growth by MBE, 184
computer simulation of metal-on-metal epitaxy, 195
computer simulation of metal thin-film epitaxy, 223
atomistic simulations of amorphization processes in ion-implanted Si: roles of defects during amorphization, relaxation, and crystallization, 235
molecular dynamics and quasidynamic simulations of low-energy particle bombardment effects during vapour-phase crystal growth: 10–50 eV Si and In atoms incident on (2×1)-terminated Si(001), 271
fundamental aspects of SNMS for thin film characterization: experimental studies and computer simulations, 289
interaction between N_2 and dimerization of the ZnSe surface, 310
theoretical study of atomic structures and dynamics on semiconductor surfaces, 331
ab initio total energy study of adsorption and diffusion on the Si(100) surface, 375
Conductivity
thin-film copper indium diselenide prepared by selenization of copper indium oxide formed by spray pyrolysis, 71
in-plane photoconduction in two-dimensional crystals in monolayers, 137
Contacts
an ion-assisted deposition system for use in the fabrication of submicron dimension device ohmic contacts, 107
Copper
oxidation behavior of Al–W alloy films deposited on Cu as a passivation layer, 18
computer simulation of metal-on-metal epitaxy, 195

Elsevier Science S.A.

Copper oxide
thin-film copper indium diselenide prepared by selenization of copper indium oxide formed by spray pyrolysis, 71
Crystalline materials
growth studies of CaF_2 and BaF_2/CaF_2 on (100) silicon using RHEED and SEM, 87
Crystallization
controlled crystallization of LPCVD amorphous silicon, 93

Deposition process
preparation of zinc sulfide thin films by the hydrothermal method, 1
an ion-assisted deposition system for use in the fabrication of submicron dimension device ohmic contacts, 107
molecular dynamics simulations of film–substrate interface mixing in the energetic deposition of fcc metals, 244
Depth profiling
fundamental aspects of SNMS for thin film characterization: experimental studies and computer simulations, 289
Diamond
scanning tunneling microscopy study of antiphase boundaries on the (001) surface of homoepitaxial diamond films, 49
texture-controlled diamond films synthesized by microwave plasma-enhanced chemical vapour deposition, 64
vibrational and electronic signatures of diamond surfaces, 314
Dielectric properties
multilayered structures exhibiting long-range surface exciton resonance, 161
Diffusion
an analytical solution for non-steady-state diffusion through thin films, 124
hydrogen permeation properties of molybdenum coatings from absorption–desorption experiments, 132
atomistic aspects of diffusion and growth on the Si and Ge (111) surfaces, 386

Electrical properties
preparation and characterization of spray pyrolysed cobalt oxide thin films, 29
Electrical properties and measurements
thin-film copper indium diselenide prepared by selenization of copper indium oxide formed by spray pyrolysis, 71
in-plane photoconduction in two-dimensional crystals in monolayers, 137
performances presented by large-area thin film position-sensitive detectors based on amorphous silicon, 148
Electrochemistry
ion transport through membranes with soft interfaces. The influence of the polar zone thickness, 10
Electron diffraction
crystallographic structure of magnetron-sputtered Nb coatings using reflection high-energy electron diffraction studies, 52
Electron microscopy
microstructural investigations of a textured black brass selective surface, 7
Ellipsometry
growth studies of CaF_2 and BaF_2/CaF_2 on (100) silicon using RHEED and SEM, 87
controlled crystallization of LPCVD amorphous silicon, 93
bilayer coatings that produce a 90° differential reflection phase shift at oblique incidence: all possible solutions, 143
Epitaxy
scanning tunneling microscopy study of antiphase boundaries on the (001) surface of homoepitaxial diamond films, 49
epitaxial growth of α-Fe films on $CaF_2(111)/Si(111)$ structures, 83
computer simulation of metal-on-metal epitaxy, 195
kinetics of submonolayer and multilayer epitaxial growth, 208
microscopic surface structures and macroscopic thin-film morphology, 364
Etching
theoretical study of atomic structures and dynamics on semiconductor surfaces, 331
Evaporation
structural characterization of $PbTiO_3$ thin films prepared by ion beam induced CVD and evaporation of lead, 99
an ion-assisted deposition system for use in the fabrication of submicron dimension device ohmic contacts, 107

Fourier transform infrared spectroscopy
preparation of zinc sulfide thin films by the hydrothermal method, 1

Gallium
first-principles calculations of surface adsorption and migration on GaAs surfaces, 345
Germanium
atomistic aspects of diffusion and growth on the Si and Ge (111) surfaces, 386
Gold
deposition of gold-containing siloxane thin films, 60
Growth mechanism
high mobility β-SiC epilayer prepared by low-pressure rapid thermal chemical vapor deposition on a (100) silicon substrate, 4
anomaly in the growth rate of anodic oxide films due to the presence of a $(Sm + Sm_2O_3)$ overlayer at a GaAs surface, 21
epitaxial growth of α-Fe films on $CaF_2(111)/Si(111)$ structures, 83
Monte Carlo simulations of film growth, 172
kinetics of submonolayer and multilayer epitaxial growth, 208
molecular dynamics and quasidynamic simulations of low-energy particle bombardment effects during vapour-phase crystal growth: 10–50 eV Si and In atoms incident on (2×1)-terminated Si(001), 271
theoretical study of atomic structures and dynamics on semiconductor surfaces, 331
atomistic aspects of diffusion and growth on the Si and Ge (111) surfaces, 386

Hydrogen
an analytical solution for non-steady-state diffusion through thin films, 124
hydrogen permeation properties of molybdenum coatings from absorption–desorption experiments, 132

Interfaces
ion transport through membranes with soft interfaces. The influence of the polar zone thickness, 10
Monte Carlo simulations of film growth, 172
Ion bombardment
structural characterization of $PbTiO_3$ thin films prepared by ion beam induced CVD and evaporation of lead, 99
molecular dynamics simulations of film–substrate interface mixing in the energetic deposition of fcc metals, 244
molecular dynamics and quasidynamic simulations of low-energy particle bombardment effects during vapour-phase crystal growth: 10–50 eV Si and In atoms incident on (2×1)-terminated Si(001), 271
Ion implantation
atomistic simulations of amorphization processes in ion-implanted Si: roles of defects during amorphization, relaxation, and crystallization, 235
Iron
nitride formation in iron–cobalt sputtered thin films, 33
epitaxial growth of α-Fe films on $CaF_2(111)/Si(111)$ structures, 83

Langmuir–Blodgett films
in-plane photoconduction in two-dimensional crystals in monolayers, 137
Laser irradiation
fundamental aspects of SNMS for thin film characterization: experimental studies and computer simulations, 289
Lead
structural characterization of $PbTiO_3$ thin films prepared by ion beam induced CVD and evaporation of lead, 99

Magnetic properties and measurements
stress and stress anisotropy in Co–Cr magnetic thin films deposited by magnetron sputtering, 43
Metallization
oxidation behavior of Al–W alloy films deposited on Cu as a passivation layer, 18
an ion-assisted deposition system for use in the fabrication of submicron dimension device ohmic contacts, 107
Metals
metal films on a SnO_2 surface as selective gas sensors, 15
computer simulation of metal-on-metal epitaxy, 195
molecular dynamics simulations of film–substrate interface mixing in the energetic deposition of fcc metals, 244
Molecular beam epitaxy
Monte Carlo simulation of simple models for thin film growth by MBE, 184
Molybdenum
an analytical solution for non-steady-state diffusion through thin films, 124
hydrogen permeation properties of molybdenum coatings from absorption–desorption experiments, 132
Monolayers
kinetics of submonolayer and multilayer epitaxial growth, 208
Multilaters
multilayered structures exhibiting long-range surface exciton resonance, 161
Multilayers
bilayer coatings that produce a 90° differential reflection phase shift at oblique incidence: all possible solutions, 143
characteristics of pyroelectric sensors of polyurea films prepared by vapor deposition polymerization, 157
kinetics of submonolayer and multilayer epitaxial growth, 208

Nickel
chemical vapour deposition of tungsten carbides on tantalum and nickel substrates, 116
Niobium
crystallographic structure of magnetron-sputtered Nb coatings using reflection high-energy electron diffraction studies, 52
dopant compensation mechanism and leakage current in $Pb(Zr_{0.52}Ti_{0.48})O_3$ thin films, 112
Nitrides
nitride formation in iron–cobalt sputtered thin films, 33

Optical coatings
bilayer coatings that produce a 90° differential reflection phase shift at oblique incidence: all possible solutions, 143
Optical properties
microstructural investigations of a textured black brass selective surface, 7
preparation and characterization of spray pyrolysed cobalt oxide thin films, 29
characterization of oriented thin films of WSe_2 grown by van der Waals rheotaxy, 38
performances presented by large-area thin film position-sensitive detectors based on amorphous silicon, 148
multilayered structures exhibiting long-range surface exciton resonance, 161
Oxides
anomaly in the growth rate of anodic oxide films due to the presence of a $(Sm + Sm_2O_3)$ overlayer at a GaAs surface, 21

Photovoltage
characterization of oriented thin films of WSe_2 grown by van der Waals rheotaxy, 38
Plasma processing and deposition
anomaly in the growth rate of anodic oxide films due to the presence of a $(Sm + Sm_2O_3)$ overlayer at a GaAs surface, 21
deposition of gold-containing siloxane thin films, 60
Polymers
characteristics of pyroelectric sensors of polyurea films prepared by vapor deposition polymerization, 157
molecular dynamics studies of particle impacts with carbon-based materials, 255

Radiation Damage
molecular dynamics studies of particle impacts with carbon-based materials, 255
Raman scattering
texture-controlled diamond films synthesized by microwave plasma-enhanced chemical vapour deposition, 64

Scanning tunnelling microscopy
scanning tunneling microscopy study of antiphase boundaries on the (001) surface of homoepitaxial diamond films, 49
vibrational and electronic signatures of diamond surfaces, 314
Selenides
characterization of oriented thin films of WSe_2 grown by van der Waals rheotaxy, 38
thin-film copper indium diselenide prepared by selenization of copper indium oxide formed by spray pyrolysis, 71
interaction between N_2 and dimerization of the ZnSe surface, 310
Semiconductors
anomaly in the growth rate of anodic oxide films due to the presence of a $(Sm + Sm_2O_3)$ overlayer at a GaAs surface, 21
theoretical study of atomic structures and dynamics on semiconductor surfaces, 331
microscopic surface structures and macroscopic thin-film morphology, 364
Sensors
metal films on a SnO_2 surface as selective gas sensors, 15
characteristics of pyroelectric sensors of polyurea films prepared by vapor deposition polymerization, 157
Silicon
growth studies of CaF_2 and BaF_2/CaF_2 on (100) silicon using RHEED and SEM, 87
controlled crystallization of LPCVD amorphous silicon, 93
performances presented by large-area thin film position-sensitive detectors based on amorphous silicon, 148
atomistic simulations of amorphization processes in ion-implanted Si: roles of defects during amorphization, relaxation, and crystallization, 235
molecular dynamics and quasidynamic simulations of low-energy particle bombardment effects during vapour-phase crystal growth: 10–50 eV Si and In atoms incident on (2×1)-terminated Si(001), 271
ab initio total energy study of adsorption and diffusion on the Si(100) surface, 375
atomistic aspects of diffusion and growth on the Si and Ge (111) surfaces, 386
Silicon carbide
high mobility β-SiC epilayer prepared by low-pressure rapid thermal chemical vapor deposition on a (100) silicon substrate, 4

Silicon oxide
deposition of gold-containing siloxane thin films, 60
Solid phase epitaxy
computer simulation of metal thin-film epitaxy, 223
Sputtering
nitride formation in iron–cobalt sputtered thin films, 33
stress and stress anisotropy in Co–Cr magnetic thin films deposited by magnetron sputtering, 43
crystallographic structure of magnetron-sputtered Nb coatings using reflection high-energy electron diffraction studies, 52
deposition of gold-containing siloxane thin films, 60
molecular dynamics studies of particle impacts with carbon-based materials, 255
fundamental aspects of SNMS for thin film characterization: experimental studies and computer simulations, 289
Stress
stress and stress anisotropy in Co–Cr magnetic thin films deposited by magnetron sputtering, 43
Structural properties
microstructural investigations of a textured black brass selective surface, 7
Surface and interface states
interaction between N_2 and dimerization of the ZnSe surface, 310
Surface conductivity
in-plane photoconduction in two-dimensional crystals in monolayers, 137
Surface defects
surface self diffusion at high temperatures: new simulational insights, 229
Surface diffusion
surface self diffusion at high temperatures: new simulational insights, 229
ab initio total energy study of adsorption and diffusion on the Si(100) surface, 375
Surface melting
surface self diffusion at high temperatures: new simulational insights, 229
Surface morphology
texture-controlled diamond films synthesized by microwave plasma-enhanced chemical vapour deposition, 64
computer simulation of metal thin-film epitaxy, 223
microscopic surface structures and macroscopic thin-film morphology, 364
Surface phonons and adsorbate vibrations
vibrational and electronic signatures of diamond surfaces, 314
Surface plasmons
multilayered structures exhibiting long-range surface exciton resonance, 161
Surface structure
microscopic surface structures and macroscopic thin-film morphology, 364

Tantalum
chemical vapour deposition of tungsten carbides on tantalum and nickel substrates, 116
Tin dioxide
metal films on a SnO_2 surface as selective gas sensors, 15
Titanium
dopant compensation mechanism and leakage current in $Pb(Zr_{0.52},Ti_{0.48})O_3$ thin films, 112
Transmission electron microscopy
dopant compensation mechanism and leakage current in $Pb(Zr_{0.52},Ti_{0.48})O_3$ thin films, 112
Tungsten
characterization of oriented thin films of WSe_2 grown by van der Waals rheotaxy, 38
chemical vapour deposition of tungsten carbides on tantalum and nickel substrates, 116

X-ray diffraction
preparation and characterization of spray pyrolysed cobalt oxide thin films, 29
epitaxial growth of α-Fe films on $CaF_2(111)/Si(111)$ structures, 83

Zinc
interaction between N_2 and dimerization of the ZnSe surface, 310
